

ANKITA HARIHAR

Software Developer | Python, JavaScript | REST APIs

✉ ankitaharihar81@gmail.com 📞 7798080414 📍 Pune, India

🌐 linkedin.com/in/ankita-harihar 🐙 github.com/ankitaharihar

SUMMARY

Final-year Computer Science student with hands-on experience in building web applications using Python, Flask, JavaScript, and MongoDB. Skilled in REST API development, third-party API integration, and authentication mechanisms including OAuth 2.0 and JWT. Seeking a fresher-level Software Developer or Backend Developer role.

Core Competencies

- Full Stack Web Application Development
- RESTful API Design & Implementation
- Authentication & Role-Based Authorization
- Database Design & Query Optimization
- Third-Party API Integration
- Real-Time Systems with WebSocket
- Browser Extension Development
- Version Control with Git & GitHub

Technical Skills

Backend Technologies

Python, Flask, Node.js, Express.js, REST APIs

Frontend Technologies

JavaScript, HTML5, CSS3, React (learning), Bootstrap

Databases

MongoDB, SQLite, SQL (Basic), Query Design

Authentication & Security

JWT, OAuth 2.0, Session-based Auth, Secure API Design

APIs & Integrations

Google Calendar API, Telegram Bot API, GitHub REST API, WebSocket

Languages

Python, JavaScript, Java (learning)

Tools & Platforms

Git, GitHub, Linux, VS Code, Postman

Methodologies

OOP, MVC, API Integration, Client-Server Architecture, Agile Basics

PROFESSIONAL EXPERIENCE

Software Developer Intern

Aug 2025 – Sep

2025

DevDeveloper | Internship

- Contributed to backend development tasks involving client-server architecture and SQL database operations.
- Implemented and tested authentication and authorization modules for a secured web application.
- Applied caching techniques and studied HTTP/HTTPS protocols to improve API response performance and security.
- Participated in code reviews and collaborative debugging sessions under senior developer mentorship.

PROJECTS:

Phishing URL Detection System

(Web Platform, Browser Extension, Telegram Bot)

Full-stack phishing detection system that classifies URLs as phishing or legitimate in real time across three interfaces — a web platform, a Chrome browser extension, and a Telegram bot — all powered by a unified Flask backend and MongoDB database.

GitHub link: https://github.com/ankitaharihar/Satark_visionbot

Technologies: Python, Flask, HTML, CSS, JavaScript, MongoDB, Browser Extension, Telegram Bot API

Key Contributions:

- Developed a phishing detection system that classifies URLs as phishing or legitimate in real time.
- Built a web platform where users can paste suspicious links for instant phishing analysis.
- Created a browser extension that detects phishing URLs while users browse websites.
- Implemented a Telegram bot for quick URL verification using Python and Flask.
- Designed backend REST APIs to process URL analysis requests and store results in MongoDB.

AI Task Scheduling Agent (ChronoKen)

(AI-Powered Study & Productivity System)

Full-stack AI productivity agent that accepts natural language task input, auto-generates personalized study plans, and syncs them directly to Google Calendar using OAuth 2.0.

GitHub link: <https://github.com/ankitaharihar/Concierge-Agents>

Technologies: Python, Flask, JavaScript, WebSocket's, Google Calendar API, OAuth 2.0, SQLite, REST APIs

Key Contributions:

- Developed an AI-powered agent that organizes daily tasks and generates personalized study plans using natural language input.
- Integrated Google OAuth 2.0 and Google Calendar API to automatically schedule and sync study events.
- Implemented real-time AI interaction using WebSocket's and built backend APIs using Flask.
- Designed a productivity dashboard with task management and scheduling features.

GitHub Profile Analyzer

Backend REST API Service | React Frontend (In Progress)

Node.js and Express backend service that fetches and analyzes public GitHub profile data — including repositories, language usage, and contribution stats — using the GitHub REST API with token-based authentication.

GitHub: <https://github.com/ankitaharihar/Github-profile-analysis-tool>

Technologies: Node.js, Express.js, Axios, GitHub REST API, dotenv, CORS, React (in progress)

Key Contributions:

- Built RESTful API endpoints to fetch GitHub user profile details, repositories, and language usage summaries.
- Implemented paginated repository fetching with query-param support for page, per page, sort, and direction.
- Aggregated language usage across up to 100 recent repositories to generate developer technology summaries.
- Configured token-based GitHub API authentication via environment variables using dotenv for secure access.
- Implemented graceful error handling for 404 (user not found), 403 (rate limit exceeded), and 500 errors.

ACHIEVEMENTS:

- Winner – Hackathon 2K25 organized by Sangli Police
- First Prize – Video Editing Competition, NMCOE Peth
- Elementary & Intermediate Grade Drawing Examination – Government of Maharashtra
- Participated in Cyber Hackathon and Ethical Hacking Megamind Workshop
- Attended technical seminars and software development programs

EDUCATION:

Bachelor of Technology – Computer Science and Engineering

Nanasaheb Mahadik College of Engineering, Sangli | CGPA: 7.76/10
